

UNLOCKING A BUSINESS OBJECT RESERVATION

Occasionally, when there are system issues, Business Objects reserved by programs running at the time of the failure, will get stuck. This also happens when people close out of JDE by using the “window close” rather than the Sign Out function in JDE. When this occurs, the user will go back into the system and see an error like the one below in several places.

This could be seen in Order Entry, when the person goes back into the same Order they were working on when the system issues occurred, or in receiving/vouchering when the Order being received or vouchered against was being worked on when the system issues occurred.

To release a Business Object Reservation, first ensure that the person does not have any programs open in their Open Applications. It is often best to have them sign out of JDE altogether. Otherwise, they can send you a screen shot of their Open Applications to ensure they are not in the program.

Once the user has confirmed they do not have any programs open, go to the “Unlock Business Object Reservation” on the Operations Technical & Setup Menu.
